Composites Science and Technology **40** (1991) 441–442

SUBJECT INDEX TO VOLUME 40

Carbon/carbon composites (fracture toughness), 231
Ceramic matrix composites (cmc), 1
Composite cylindrical springs, 251
Crack growth (CFRP laminates), 307
Crushing of composite tubes, 31, 265, 377
Crushing of composite tubes (FE analysis), 275

Damage growth
  effect of lay-up, 167
  modelling, 169
  prediction for composites, 147
Damage mechanics of composites, 147, 167
Double cantilever beam tests (interlaminar fracture), 98

End notch flexure tests (interlaminar fracture), 101
Energy absorption in composites, 31

Failure analysis of laminated composites, 289, 296
Failure mechanisms (carbon/PEEK), 47
Fatigue cracks in 0/90 CFRP laminates, 307
Fibre bridging in fracture (C/C composites), 231
Fibre defects (SiC fibres), 200
Fibre/matrix adhesion (polyetheramide/glass fibre), 19
Fibre/matrix interface, 53
Finite element analysis (crushing of GRP tubes), 275
Finite element analysis (interlaminar fracture specimens), 87
Fracture micromechanics (Al/zircon composites), 346
Fracture of particulate composites, 333
Fracture processes in carbon/carbon composites, 234
Fracture toughness
  Al/zircon particulate composites, 340
  carbon/carbon composites, 231
Fragmentation during crushing (composite tubes), 386, 397
Fragmentation test, 19

Glass cloth/epoxy tubes (energy absorption), 265

High-temperature behaviour (SiC whisker/aluminium composites), 213

Injection moulding (long-fibre glass/PBT-PET blends), 423
Interface (carbon/PEEK), 53

Composites Science and Technology (**40**) (1991)—© 1991 Elsevier Science Publishers Ltd, England. Printed in Great Britain

Interlaminar fracture test (FE analysis, 87
Interparticle spacing (effect on toughness), 344

Laboratory scale screening tests, 131
Long-fibre injection moulding (glass/PBT-PET blends), 423
Loss factor (damping of GRP and CFRP), 355
Low temperature thermal expansion (CFRP), 69

Micromechanical model (of plastic behaviour), 115

Notch size effect, 158
Notched strength of damaged composites, 167
Notched strength prediction for damaged composites, 147, 175

Orthotropic plasticity model, 122

Particle size (effect on toughness), 344
Particulate composites (aluminium/zircon), 333
PEEK
  failure mechanisms in carbon fibre/PEEK, 47
  thermal expansion, 69
Plastic behaviour of composites (micromechanical model), 115
Poly(ether block amide) matrix composites, 19, 25
Process zone (fracture of Al/zircon composites), 346
Progressive crushing of composite tubes, 377, 382
Progressive folding of composite tubes, 380

R curve behaviour (C/C composites), 243

Screening of resins and composites (aerospace applications), 131
SiC filament strength (effect of wetting by Al), 193
SiC whisker composites (high temperature behaviour), 213
Single filament fragmentation test, 19, 25
Splaying during crushing (composite tubes), 386
Springs (cylindrical composite), 251
Stable crushing process (GRP tubes), 280
Statistical models of strength, 196
Stiffness loss due to transverse crack growth, 318
Stress analysis of laminate composites, 289
Stress interaction terms (polynomial theory), 181

Tensor polynomial failure theory, 181
Thermal expansion (CFRP), 69
Transverse ply cracks (CFRP), 307
Trigger mechanisms (glass cloth/epoxy tubes), 265, 270
Triggering crushing behaviour, 31

Vibration damping in GRP and CFRP, 355

Wetting (of SiC by Al), 193
